

## Kurtosis and skewness

### Skewness

Positive skewness -  $\text{mean} > \text{median} > \text{mode}$

Negative skewness -  $\text{mean} < \text{median} < \text{mode}$

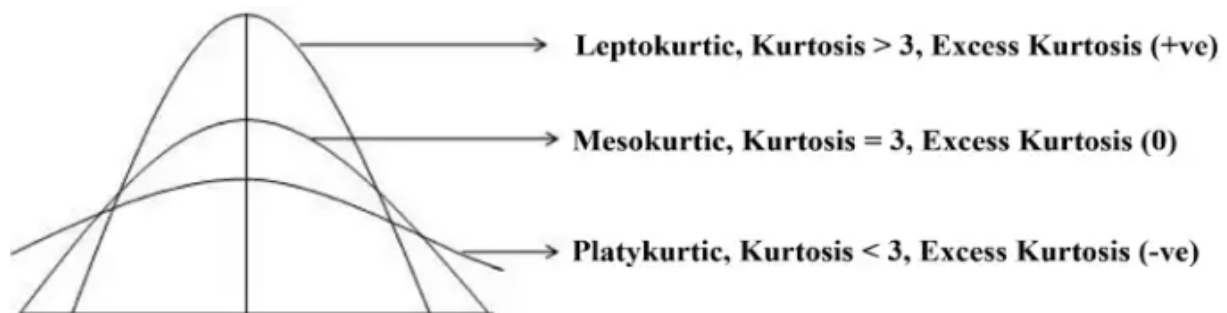

### In our Placement dataset

etest\_p,mba\_p values positive so it is called **Positive skewness**

ssc\_p values positive so it is called **Negative skewness**

=====

### Kurtosis

### In our Placement dataset

Etest\_p,degree\_p values >3 so it is called **Platykurtic**
